Vitrohm’s Production Capacity back to “normal” in May

Dear customer,

The end of the state of emergency in Portugal allows Vitrohm’s production capacity to get back to “normal” from May 4th, but still with restrictive safety and health measures to help contain the virus.

Our primary concern is the health and safety of our employees, customers, and partners. That commitment covers everything, from making sure we are doing our part to “stop the spread”, to maintaining business continuity so that our customers and partners don’t have to worry about theirs. Like most companies and institutions, we are closely monitoring the latest information provided by the World Health Organization (WHO), the Directorate-General of Health (DGS) and portuguese government, and we are adapting our plans to reflect the updated guidelines and evolving situation of COVID-19.

We remain confident in the power of our people and of our collective ability to come out stronger. Please know that the entire Vitrohm community is doing our part and are here to serve when and where needed. If you have a business need that isn’t being met, or have questions about Vitrohm’s business continuity or need help with your own business priorities, please do not hesitate to contact us.

Our focus is on keeping our employees safe and maintaining our business continuity so that we can help you keep yours.

Thank you for your trust and partnership.
